X-Tinguish® X-Treme Aerosol Fire Suppression Tool

R4.2020.1

FOR USE IN CONTAINED SPACES

- **Locate** a safe area to deploy the X-Treme near the seat of the fire.
- **Locate** a clear and safe exit point.
- **Activating the X-Tinguish® X-Treme**
- 1.) Pull the R-pin (labeled #1) out of the unit. 2.) Pull the igniter pin out of the unit and immediately throw the unit into fire near the seat. It will deploy in 8 seconds. You must throw it before activation starts.
- **Close off enclosure** and allow the X-Tinguish® X-treme's aerosol to fully deploy and interact with the fire.
- **Evaluate fire conditions** and proceed according to Structure Fire Operational Guidelines.

The X-Tinguish ®X-Treme has been tested and found to be effective on Class A, B, C and K fires in contained spaces.

User assumes all liability in connection with the use , misuse, handling or the mishandling of this device.

Do not use if not trained and familiar with instructions, MSDS and operational guidelines.

Caution: Thermal layers may be affected during deployment, resulting in hot air moving to the floor momentarily. Occupants should always be removed prior to deployment.

Caution: PPE (personal protective equipment) and (SCBA) self contained breathing apparatus should be used when entering an area in which the X-Tinguish ®X-Treme has been deployed.

Caution: The X-Tinguish ®X-Treme aerosol may reach high temperature during deployment. Maintain a deployment minimum safe distance of 2' (two feet) from another person.

ALWAYS OVERHAUL FIRE AFTER DEPLOYMENT
